PROFESSIONAL SUMMARY

HPC Engineer with a background in DevOps and infrastructure automation. I specialize in deploying high-performance GPU clusters and building automated workflows to manage server lifecycles. Skilled in using Python, Ansible, and Terraform to streamline complex environments and leveraging hardware telemetry to ensure maximum system reliability for AI-driven infrastructure.

EDUCATION

Lewis University

Master of Science in Computer Science

Romeoville, IL

Dec. 2023 – May 2025

Lords Institute of Engineering and Technology

Bachelor of Engineering

Hyderabad, India

2019 – 2022

EXPERIENCE

HPC Engineer Team Lead

Wistron Partnered with Dell/Nvidia

May 2023 – Present

Irving, TX

- Automate provisioning and lifecycle management of GPU server clusters using Ansible and Terraform.
- Monitor system health and performance of NVIDIA Blackwell (GB200) compute trays using Redfish and BMC telemetry.
- Optimize high-speed fabrics (InfiniBand/ROCE) and PCIe topologies to reduce latency for distributed AI training.
- Diagnose and resolve complex hardware-software integration issues in collaboration with OEM vendors.

Graduate Assistant (Remote)

Lewis University

Jan. 2023 – May 2023

Romeoville, IL

- Leveraged DevOps methodologies to automate the configuration and deployment of university IT resources and local development environments using Bash and Python.
- Streamlined support workflows by integrating Team Dynamix with automated alert systems for over 500+ daily users.
- Managed Active Directory, Office 365, and MFA configurations to ensure institutional security and compliance.
- Delivered technical training and discovery sessions for newly implemented software solutions across departments.

PROJECTS & RESEARCH

Personal Portfolio Website | *Web Development, Cloud Hosting*

- Developed and deployed a personal portfolio website at mirhyderali.com to showcase professional experience in HPC, cloud infrastructure, and DevOps.
- Configured web hosting, domain routing, and automated deployment pipelines to ensure high availability and responsiveness.

Generative AI for Software Testing | *LaTeX, Python, QA Automation*

- Published in ITNG Conference; investigated AI-driven test case generation and optimized automated QA processes.

TECHNICAL SKILLS

Cloud & DevOps: AWS (EC2, S3, IAM), Azure, Docker, Jenkins, CI/CD, Ansible, Terraform

Systems & HPC: High-Performance Computing (HPC), NVIDIA Blackwell/GB200, Linux (RHEL/Ubuntu), BMC/Redfish, VMware

Networking: TCP/IP, DNS, DHCP, VLAN, VPN, Firewalls, Load Balancers, Cisco Networking

Programming & Tools: Python, Bash, JavaScript, REST APIs, Git, Wireshark, Postman, Team DynamiX

CERTIFICATIONS

AWS Certified Cloud Practitioner (In Progress), GCP AI Leader (In Progress)
